Feedback – End-Module Assignment – Principles of Digital Forensics and Cyber Law – Michael Geiger

Thank you for your submission. I hope you have found this assignment interesting.

Following lines suggest some feedback about your assignment:

i.   **Knowledge and understanding of the topic/ issues under consideration:** A very well written document that shows good understanding and suggest in-depth research into the topic. The second paragraph where you have defined personal information usage should be supported with some GDPR discussion-20

ii.   **Criticality:** There is nothing to be improved in this section. However, little bit more discussion should have been done on the importance of implementing countermeasure of the identity -15

iii.   **Use of relevant sources:** good work in this section, statements are referenced where required -15

iv.   **Structure and Presentation:** The structure of the report is very well described, relevant table of content, good text alignment and font style. However, headings should be short and precise, these should not be written in the form of a complete sentence. – 7

v.   **Academic integrity:** No problems with References, these are well written throughout the document. – 7

vi.   **Your strong point**: Use of relevant material, further research, explanation and referencing

vii.   **Things required some considerations**: Heading style and little bit more work in critical analysis

-

NOTE: All grades are subject to change until they have been agreed by the External Examiner and ratified by the Examination Board.

Kind regards

Your tutor
